

FOR IMMEDIATE RELEASE — May 2025 / Berlin, Germany

## **Voxativ Presents Two Hybrid-Active Systems, One Sonic Philosophy at High End Munich 2025**

At High End Munich 2025, Berlin-based Voxativ GmbH offers visitors a unique invitation: step into Room A 4.2, E206, and explore two different systems, both united by a single, uncompromising vision of emotional, pure listening. Throughout the day, Voxativ will alternate between these setups, demonstrating that musical truth and impact are not reserved for flagship systems alone.

At the heart of both demonstrations is Voxativ's modular hybrid-active loudspeaker philosophy, which marries wideband full-range drivers with carefully matched active bass augmentation. Whether you're hearing their most advanced expression or an entry-level configuration, this design ensures coherence, dynamics, and immediacy—hallmarks of the Voxativ house sound.

### ***System One: The Statement Experience***

At the pinnacle of the brand's engineering is the **Voxativ 9.88 System** (\$79,900) —a modular hybrid-active loudspeaker array combining wideband clarity with Ripol-powered bass precision. It remains a reference for those seeking effortless dynamics, speed, and immersion, all grounded in the purity of a single-driver, crossover-free architecture.

This system is driven by the **Voxativ T805 SET Integrated Amplifier** (\$34,900), which uses 805 triode tubes in a pure Class-A topology. Its unique topology and hand-built Berlin black chassis offer not only power but a natural, richly textured presentation of music that connects directly with the listener.

Making its world debut is **the new Voxativ Streamer** (\$16,900)—a reference-class DAC and network player developed entirely in-house. Designed to perform at the highest level, it features dual-mono ES9038PRO conversion, bit-perfect playback up to 768 kHz, a fully balanced analog output stage, and an ultra-low-noise power architecture to ensure total signal purity. Built for Roon and UPnP integration, the Voxativ Streamer is more than technically advanced, it captures the soul of the recording with that unmistakable Voxativ touch: pure, direct, and profoundly moving.

### ***System Two: The Accessible Revelation***

In purposeful contrast, Voxativ introduces a compact, budget-conscious system built around the newly refined **Alberich<sup>2</sup> loudspeakers** (\$17,900), now equipped with the **optional AF-2A Alnico full-range drivers**. These 5-inch drivers deliver astonishing performance, preserving the detail, tonal accuracy, and immediacy that characterize the Voxativ lineage, now in a footprint that fits a wider range of rooms and lifestyles.

Just like its larger sibling, the Alberich<sup>2</sup> uses Voxativ's modular hybrid-active design, incorporating powered bass modules for enhanced extension and control. The system is driven by third-party entry-level solid-state electronics, making it a compelling demonstration of how design, not just dollars, drives performance. It's a revelatory listening experience that brings the Voxativ philosophy within reach of a broader audience, ideal for music lovers just beginning their journey into high-end audio or seeking performance without excess complexity.

“At Voxativ, we believe music should move you, not just with resolution, but with emotion,” said founder and chief engineer Inés Adler Dipl.-Ing. “With both systems in Munich, we're showing that this emotional connection is possible whether you're at the summit or just starting out. What unites them is our hybrid-active platform and our devotion to pure listening.”
