

UNICOSUONO

European kick-off
4th December 2021 - Hotel Savoy, Rome

In the Rome of Fellini's "La Dolce Vita", in the prestigious Hotel Savoy nearby Via V. Veneto, the new made in Italy brand UNICOSUONO will make its European debut on the 4th of December 2021.

The event is reserved to the press and sector operators both from Italy and from several European countries.

What is UNICOSUONO and why are we talking about a European debut?

The new brand is the culmination of thirty years of high-level audio experimentation by designer Andrea Vinciguerra who officially makes his own debut with top-level products in the High End market. Exceptional partners will take part such as: *J. Sikora* and *LampizatOr* from Poland and *Canor Audio* from Slovakia; all these brands are imported into Italy by *Cinemasound*.

UNICOSUONO produces passive preamplifiers with transformers, vibration free acoustic diffusers, anti-seismic systems for all needs - namely tables, single bases and modular systems- signal, power and power cables in which ***Design Research Quality and Performance*** – the four pillars of UNICOSUONO's philosophy - are merged into a harmonious union.

These creations are divided into two large families: the High End Series which is at the top of the market and the EXTREME series, that is the family of very limited edition projects (only 25 numbered pieces for each product) and outside the conventional schemes. Here the shape is bent to performance, a dimension in which there is no concept of compromise.

J.Sikora produces innovative turntables and arms of great value. Its founder, Janusz Sikora, will be in person in Rome exhibiting his flagship jewel, *Reference with unipivot arm KV12*, for the first time in Italy.

LampizatOr is famous all over the world for its valve dacs. Lukasz Fikusz, the Founder, will be presenting his flagship MC2 fully valve phono preamplifier for the first time ever.

Canor Audio will be represented by its Export Manager Ivan Bosnovic, who will bring to the Roman Event the reference, tube-based preamplifiers and power amplifiers which will be officially introduced at this event for the first time.

UNICOSUONO will be exhibiting part of its the cable series, both High End and EXTREME one, the anti-seismic bases and the anti-seismic table with a special finish and the *Accento 2.20* vibration free loudspeakers.
